References Category:Technical drawing softwareQ: ASP.Net MVC DropDownList: binding to the View Model and calling a function on selection change? So far, I have been using the following to bind a drop down list to a View Model. When the drop down list changes, a function in the View Model is called that creates a new instance of the View Model and populates it with the relevant information. model.SelectedOptionID, Model.Options, new { @class = "SelectedOption" })%> How do I bind the drop down list to a function in the View Model, that is called when the selection changes? A: You should do this in your javascript: $(document).ready(function(){ $('#SelectedOptionID').change(function(){ //Your function here. }); }); I think it's easier to bind this with the jQuery library and keep your page lighter, but that's up to you. You can also do this with a call to an action: model.SelectedOptionID, new[] { new SelectListItem { Text = "Option 1", Value = "1" } new SelectListItem { Text = "Option 2", Value = "2"
