History AutoCAD was originally a CAD system called ProjectCenter. This was the first version of AutoCAD. It was developed in the early 1980s by a team of programmers working for Strategic Management Inc. (SMI) at the time, a company that developed CAD software, including application design, product design, drafting and mechanical engineering software. In 1983, AutoCAD became the first commercially available computer-aided design and drafting system for 2D and 3D drafting. It was developed by its current owners Autodesk, a computer graphics software company based in San Rafael, California. Autodesk was started in 1982 by a group of experienced CAD users led by Charles Simonyi. Autodesk was founded to create a 3D CAD system, but it began with a 2D drafting system, AutoCAD. The name "AutoCAD" is a combination of "Auto" and "CAD". When the initials were selected, there was an apparent copyright conflict with Auto-On-Line, Inc., owners of "Auto-On-Line" and "AutoCAD-On-Line". Autodesk settled the conflict by purchasing the "Auto-On-Line" and "AutoCAD-On-Line" names for a reported sum of US\$1.00, with the stipulation that "AutoCAD" could not be used for Auto-On-Line products. In the early days, its position in the CAD industry was helped by a close relationship with graphic artist and user Neil Brown. After acquiring the rights to use the Autodesk name, Autodesk made the decision to hire him full-time and make him the product manager of Autodesk, making him Autodesk's first paid employee. In his role as product manager he was heavily involved with product and system development, and with the design, operation and maintenance of Autodesk's online help and support systems. He worked closely with Autodesk's first CAD software engineers, Larry Aycock and Chris Goldberg. He has been involved with Autodesk products for more than 26 years. The first version of Autodesk ProjectCenter was first shipped on 3 March 1985. On 16 June 2007, Autodesk completed the purchase of CadSoft, the California-based developer of CAD/CAM and GIS software products, in a US\$325 million deal. Autodesk subsequently opened the GIS division of CadSoft as a subsidiary company. 5b5f913d15
