Boot Antidote XP file [retrieved Oct 4, 2011] Comments or ratings Help screen Installation on your system The Boot Antidote XP tool is meant to be installed on a system-wide basis. While this requires a simple registry edit, it does not require admin rights. Change the following registry key HKEY_LOCAL_MACHINE\SOFTWARE\Microsoft\Windows\CurrentVersion\BootInfo Be careful when you do this, you must use the correct key and not mess with the other entries such as WIN2000 or WINNT. Also, some editions of Windows, such as Home and Professional, do not have this key. To check if your system has this key, search for BOOTINFO and select the key that most closely matches what you are using. The other value for BOOTINFO is "NOTFOUND" in all cases. The BOOTINFO key has the following three categories: NotFound=Signature=bootable i.e. bootable volume boot BOOTINFO REG_BINARY r:SMBOOT=It is not bootable BOOTINFO REG_BINARY i:wBIDEXI=0x1003\Device\BOOT BOOTINFO REG_BINARY s:SI_MODEL=SMR2\Device\BOOT (boot name) BOOTINFO REG_BINARY v:SV_LID=0x4007\Device\BOOT BOOTINFO REG_BINARY k:SV_NAME=Use the specified bootable device The BOOTINFO REG_BINARY values are the bootable part of the boo.ini file. The values are all the same but the two BOOTTYPE values are different. BOOTTYPE REG_BINARY r:SBOOT=2 BOOTTYPE REG_BINARY i:BIDEXI=0x4007\Device\BOOT (boot name) BOOTTYPE REG_BINARY i:SH_MODEL=LID=0x1\Device
