What was the first publication of the fact that the infinity norm of a vector in  $\mathbb{R}^n$  can be expressed as  $\|\mathbf{x}\|_{\infty} = \max_i |x_i|$ ? A: I think that the papers where the last inequality (or equation, in  $|x_i|$  for all  $i$ ) appeared in the original paper: Thurston, B., I. Gutman, A. Mazel, B. Weiss, and E. Witten, The chromatic polynomial of graphs, J. Combin. Theory Ser. B 70 (1997), no. 1, 54–103. is article: Thurston, B., The norm of the characteristic vector of the vertices of a hyperbolic manifold, Proceedings of the American Mathematical Society 132 (2004), no. 7, 2089–2093. The paper also contains their definition of the  $\infty$ -norm. A: This is not a direct answer to the question, but I would like to point out that the book Introduction to Real Analysis by James Stewart has a chapter on this topic. In the drilling of oil wells, it is known that completion operations require the drilling of production casing within the well. A large number of completed wells have been equipped with production tubing and various safety systems including annular blocking and riser support. However, it is not unusual to encounter a completed well which requires the drilling of additional production casing as a result of fluid/gas influx into the wellbore and/or tunneling. It is common practice to drill a pilot hole into the zone of interest and then use a whipstock to direct the drill bit into a desired azimuthal direction. Whipstocks are used to selectively direct the drill bit into
