I'm working on a card game where you play a bunch of creatures, using the cards as currency. I have some artwork I'm going to use as the back of the cards, but the black text along the bottom looks a bit too plain for a game of this nature. I was thinking about using a watermark during play, but I can't figure out how to go about this. What are some basic things that I can do to make sure my cards look consistent? A: One common way of adding a 'watermark' to a card is to print the watermark on the top of the card, so that it overlaps the black border or the black text/art. For example, the first version of the card below, shows the watermark overlaid in white, along the top
