System tray running mode You can find TicTocTitle hiding in the background, in your system tray. You can gain access to its configuration settings by right-clicking on its tray icon. There's no support for a help manual so you need to experiment a little bit with the dedicated parameters in order to understand how the tool works. As soon as you run it, the program reveals the current time (in hours, minutes, and seconds), day of the week, date, and other time-related details in the active title bar of your windows. Configure date and time settings TicTocTitle offers you the possibility to copy the date and time information to the clipboard so you can quickly paste it into other third-party utilities. What's more, you are given the freedom to make several adjustments to how data is displayed in the title bars. You can set the title string, specify the text that can be copied to the clipboard, and alter the text in terms of font, size, bold mode, color, and x/y offset. Tests have pointed out that TicTocTitle is friendly with system resources so you do not have to worry that it burdens the overall performance of the computer. You may keep it running in the background. However, it has not been updated for a long time so you may come across compatibility issues and all sorts of bugs on newer operating systems like Windows. Final remarks To sum things up, TicTocTitle comes bundled with several handy features for helping you quickly read the date and time, and can be tweaked by rookies and professionals alike.
