Multiple rendering engines, including Adobe Flash, may be used to render images and animations for AutoCAD. AutoCAD is programmed in the AutoLISP language, which permits an AutoCAD user to customize the environment by creating new commands, replacing existing commands and editing existing commands to create unique features and functions. AutoLISP commands are also used to automate some processes. AutoCAD also supports Visual LISP, which is a language that has all the functionality of AutoLISP but is more practical for beginners. Visual LISP is primarily used to automate tasks such as drawing, calculation, web site publishing and publishing. AutoCAD can be integrated with Microsoft Windows applications, using Windows Scripting Host (WSH), MS Office and OpenOffice through the use of the VBA programming language. VBA is a script-driven automation language that enables a user to design and automate applications or parts of applications, such as macros, formulas and reports. VBA is also useful in the creation of applications, components, and tools for automation and data migration. Since AutoCAD is also an application, there are many third-party tools to manage data between applications. AutoCAD uses the Microsoft.NET framework to support development for the Windows operating system, especially for the creation of add-ons and plugins. The AutoCAD team publishes several libraries that extend the.NET Framework. These are named as AutoCAD Architecture, AutoCAD Electrical, AutoCAD Civil 3D, and AutoCAD Architecture Electrical and Civil 3D. ObjectARX is a C++ class library that provides an object-oriented programming interface to the AutoCAD program. There are also several plug-ins that can be used to automate repetitive tasks. The Autodesk Exchange App market is the source of numerous third-party AutoCAD add-ons. Versions AutoCAD LT AutoCAD LT, formerly Autodesk Design Review, is a free replacement for AutoCAD 2000 and AutoCAD LT R15 and R20. It is based on the Autodesk Design Review R21, AutoCAD LT R21, and AutoCAD LT R23 platforms, which were discontinued on January 29, 2013. AutoCAD LT supports the ability to view and edit drawings with multiple viewports. AutoCAD LT supports 3D printing through the use of RP1 and RP2. The new ca3bfb1094

**Automatic Live Feedback:** Do you know what happens behind the scenes as you create your design, but want to see it onscreen? The latest release of AutoCAD lets you see your drawing onscreen as you work, helping you identify errors faster. Live Feedback lets you observe your drawing as it is being created, including the appearance of new design objects, such as circle and rectangle objects, which appear on the canvas and have properties and a live action representation. When you edit a design, the changes you make appear instantly onscreen, so you know immediately if the changes you make are correct. The new "Ink & Shape" option in the Live Draw command lets you see where you are drawing and which shape tool is selected. In this release, you can also turn on the Live Draw pane to see the drawing appear onscreen. When you are finished drawing, you can use the "Exit Live Draw" command to go back to your drawing window. **Rotating Custom Views:** Show different views of your 3D drawings in your standard drawing window. By default, you can only see a single view of a 3D drawing from your drawing window. (for video, see the video section on the AutoCAD homepage for more details: new view panel and rotation for 3D models). If you'd like to have different views of your 3D models that you can interact with, you can use the new Custom View feature. By default, you can choose from 4 different views of your 3D models in the Standard Views command. Choose from the following three views: From the Edit menu, choose Custom View. Select a view from the New View panel. The active view is highlighted in red. If you'd like to see more views than the ones currently available, choose Custom View from the View menu. Each view of your 3D models has its own set of axes and properties. In addition, if you are using a floating 3D model, the new Custom View features lets you see your model in front of your drawings, even if the 3D model is far away from your drawings. **New Draw dialogs:** The New View dialog provides a better way to pick a view for a 3D model. The new dialog has a contextual menu that lets you choose a view based on your current model. The choices are displayed in the dialog
