Q: Convert file with extension.lua to.lua.meta? I have some file named foo.lua which is a file. I am trying to convert it to lua.meta but this does not seem to work. I have tried with the following command `prince -o foo.lua.meta foo.lua` The shell does not return any error but I do not see any change in the file. I also tried with `prince -o foo.lua.meta foo.lua mv foo.lua.meta foo.lua` The shell does not return any error but it does not change the file. What's wrong with the above commands? A: You need to keep `prince` to generate a.meta file (which is empty

in the absence of a.lua.meta file).
