If you've never played FIFA before, the concept behind the game might seem a little strange. The game's so many basic features that it almost seems like a chore to learn and a challenge to master. While this is true, the game is the first of its kind. Not the first soccer game, which of course has been around for a long time. But the first in a specific genre of video game. You're not just a player in a team of virtual footballers. You're the real life player with action and reactions that translate into a better, more authentic performance in a game of football. Every tiny change that goes into the game, from the way your foot moves when you kick, to the way you run, pass and shoot when you're playing as a pro, gives you an advantage you would never have in real life. You're the one who controls the game, the one who makes the real-life decisions that decide how the game goes. It's a new kind of soccer. And it's real. FIFA 22 is the first of its kind. Update - 19 March 2020: FIFA 19. What's New In FIFA 21? As the World Cup got under way in South Africa, FIFA 11 had two huge features that set it apart from its competitors: More faithful player models The high and low FIFA 11's sport performance engine brings the reality of playing a game of football to life in a way that only FIFA can. The addition of the new Real Player Motion Technology (RPMT) adds millions of new animations that breathe life into the game's fast-moving, skilled players. A new energy-based gameplay system makes it feel like it's possible to physically impact every aspect of the game. FIFA players now feature a range of realistic physics-based behaviours, such as the way players run, fight, tackle, jump and even knock the ball around the pitch. bc9d6d6daa
