I know the vectors do not get reduced down to 1 dimension when we look at the output from tfidf\_vocab\_tfidf\_vectorizer\_doc\_vectors\_to\_tf\_vectors I know the dimensions output is for words and words are much less than tokens. A: tfidf\_vocab\_tfidf\_vectorizer\_doc\_vectors\_to\_tf\_vectors only reduces on the vocabulary. Vocab size is determined using the fit\_one\_vector\_for\_label method. What tfidf\_vectorizer does is extract features or embedding vectors for each word token from the input document based on tf.idf and values in vocabulary. These are then combined to have a feature vector for each document. You can
