The first public testers were chosen, test period was four months, and the project was run into on June 1, 2008. A slightly modified version of these versions, dubbed Open PES, was released on February 27, 2009. The team in charge of the game worked with Gazillion Entertainment on the game; the team was made up of people such as Tom McClure, Ulrich Schreiner, and Jake Rubin. Everything about the game's graphical style, gameplay mechanics, and overall story can be traced back to the original game. The first iteration of the game was set to be released in September 2007, but development was pushed back until 2008. The beta test phase was conducted entirely online, with each user testing the game by downloading a text file containing items, codes and items to use in the game, as well as a few maps, and then playing online matches. In late March 2009, it was revealed to the general public that the official name of the game would be Pro Evolution Soccer 2012. In addition, a reveal trailer was released and was described as "a teaser trailer, albeit visually impressive". The trailer showcased a mixture of scenes from past Pro Evolution Soccer games, as well as giving a first view of the new player models and gameplay mechanics. The game was available for free registration. On August 9, 2009, the player registration period ended, with an estimated total registration of 3.4 million people. Of this, approximately 3 million have registered (an estimated 0.1% of the world population), in a total of 652 countries and regions. It is estimated that a total of 70 million test reports have been generated so far. PES 2013 is available in English and French. The Beta test launched in mid June in the US, Australia and the UK for Xbox 360, PlayStation 3 and Windows users, while in Europe and New Zealand the consumer releases were delayed. The beta period lasted from June 10 to July 8. Most of the testers had the option of virtual testing, which would reward the consumer with a code that allowed them to download a video game disc. Each disc gives the consumer the opportunity to either participate in matches or to receive updates and downloadable content.
