Guys, i am using windows Vista 32 bit. I am trying to do this tutorial, it seems to be successfull it gives the cracked file i downloaded from the getty, but when i try to launch the game, it does not start, i am not sure how to use the crack, can someone please tell me if i have to make a split.dll also? hey i have been attempting to do this just

as you are, since last friday. i have downloaded the finished.exe file and have been cracking it for a week or so but it is not working. they have been changing the instructions and what not, but it still says its broked version, if it gets fixed then please point me in the right direction as my computer is on the bottom of the list and i may not be able to afford another one for a while. Make sure that you are not making any changes to a 32bit instance of windows...you need to have the 64bit version of windows to do a 32bit crack. After about 10 minutes of being able to play the game now, it runs the splash screen but then throws a thousand errors and asks you to fix the.dll errors, then just stops working. You cannot talk to it at all now, either.Q: How to create a equals comparator that returns false for multiple object attributes? I have an object that has slightly different methods for multiple Properties. Most of its properties are just boolean (true/false), but I also have few that are exact matches (i.e. "balance") and a few more they are inexact and must pass an overhead cost to be equal (i.e. commission). I have tried to write Equals/GetHashCode with a bunch of IF statements that look like this: public override bool Equals(object obj) {
