What's New in the?

Manage a thorough activity database. Running the application brings up a cleverly simple interface. It lets you quickly accommodate, not requiring any previous experience to start managing your time right away. A centered workspace lets you easily create tasks and displays them along with related details. The creation process takes about several seconds, the only mandatory requirement field being the name. Depending on you domain of activity, the application gives you the possibility to store tasks in dedicated folders, represented by projects. These are displayed in a side panel to offer you quick access to any category of interest. Straightforward with little features to use For a better management, several timeline tabs are available to store your tasks in. These range from the basic inbox, someday/maybe, to next and completed. However, there is no detailed view regarding time, nor is there an integrated calendar to mark tasks in. One of the biggest disappointments is the lack of a reminder, seeing how you can set a start and due date. Moreover, tasks are constantly displayed in a small list that stays on top of any other application and cannot be toggled off. It only shows active tasks, corresponding category and time of creation, rather than remaining time. In conclusion To sum it up, TimeGT tries to give you the possibility to manage your time a little better. It puts a friendly interface at your disposal and lets you quickly accommodate. However, the amount of features it comes equipped with leaves a little something to be desired, constantly requiring your attention.
