BuyQ: reversing substrings in a string I have a string with tokens like this, for example: "This is the keyboard/dvd that the user will use.\r " How do I put them into an array with token\_1 (string) and token\_2 (integer) correctly? A: You'll have to preprocess the text, an approach like this seems fairly robust: require'strscan' scanner = StrScan::Scanner.new(text.gsub("\r ", "")) items = [] until scanner.eos? first = scanner.scan(/A(\S+) (.\*)\Z/) items
