---

: GaugeBook is a tool designed to display gauges of MS Flight Simulator X (FSX SP2) on a secondary computer, focussing on small notebooks. The vision behind GaugeBook is to display your gauges like a real airplane, in a way that will be easy to view and read. Fitted with gauges designed by skilled graphic designers, GaugeBook has a lot of customizations to make it more useful: - you can define the scale of the gauges to

---

your liking and at an easier reading angle for you - in case you want to view several gauges at once, you can use the widget library to display multiple gauges at once - the scrollbar allows you to move around, even if your gauges are displayed in a black box - the dropdown menu allows you to choose an already displayed gauge - 2D & 3D mode are supported, with configurable options to choose between the two depending on your preferred

---

view - the scale-balloon displays a dynamic scale and a ballooning status indicator with the exact scale value - there are many possibilities to customize all of your gauges to your liking - GaugeBook is a flight recorder too! Installation : Download GaugeBook and install it on your secondary computer. If you wish to display multiple gauges on the screen at the same time, we suggest you install MS Flight Simulator X on your

---

secondary computer, and install SimConnect on it. In FSX, go to Settings > Extras > SimConnect. Configure a connection between the host and your secondary computer, with IP Address and Port number (look at the manual for instructions on how to b7e8fdf5c8

Installation: GaugeBook works by connecting to the registered gauges that are already running in MSFSX. In order to connect, GaugeBook will require the IP address, port number, GUID, and the passenger number, as well as the appropriate permissions to function. There are a few ways to receive these, but the easiest option is to use SimConnect, which allows you to connect to existing gauges

---

from your login computer in MSFSX. GaugeBook does not display gauges based on flight, as the flight gauges in FSX SP2 are easily accessible from other applications. If there are no gauges running with the relevant mission / map / model combination in the current session, the computer will automatically start one, and this is the gauge which will be displayed. Operation: GaugeBook is a floating bar graph, which is by default

---

displayed at the bottom right corner of the FSX main-window, and by default has the size of 200,100. The size of the gauge and its position on screen can be altered. The GaugeBook will stop updating it's gauge data if it detects a slowdown in the connection, or if FSX is quit. GaugeBook comes with a GaugeBookOptions dialog box with the following options (all except the "Actual Speed" option are only present when FSX SP2 is running, and

---

GaugeBook is connected to a Gauge that can be registered). Advertising and Feedback Like with everything else we do, we want to make sure that GaugeBook helps people get the most out of FSX. Please let us know how we can make GaugeBook better, and if there are any things you would like to see in it!

Suggested enhancements and/or problems which we could fix for GaugeBook:

Make this Gauge Book run

---

under Windows 7 Make this Gauge Book run under Mac Make this Gauge Book run under other operating systems Make the Gauge Book display gauges for flights Make it so that when you select an FSX map name, the gauge settings are saved in the FSX.ini and it will show up for all models Can you add waggle to the orientation of the gauge while flying Can you make the gauge stop rotating when flying and position the gauge at the

---

same spot for all models

#### What's New in the GaugeBook?

The two types of buying options available for the software you are seeing now: a) We have sellers who are selling the product as a single entry price and you can pay for the software by using your credit card. b) We also have sellers who provide an on line payment system with PayPal

---

and you can pay for the software by clicking on the PayPal button and not creating your credit card number. As you can see, we have sellers who sell software to our buyers in two very different ways. The reason for this is that in some cases our sellers are in need of cash to cover their operating costs, and to help them recover their expenses and debts; in other cases our sellers are offering a Paypal option for our buyers so they can

---

support that business operation. For simplicity's sake, we are offering both types of selling options for our buyers, all users get the same price, service and support. Thank you for understanding. We really appreciate your trust. We strongly recommend to read our list of these sellers requirements before you buy or download any product. It will help you know exactly what seller is providing the service. Screenshots: F.A.Q Q:
