.Q: How can I find out which jar was included in a.war and extract the related classes? My project organization is: webApp -- classes -- webapp-common -- Dependencies.jar -- components -- components-common -- dependencies.jar --lib -- --WEB-INF -- web.xml  
After building my project, I created the.war file:  
java -jar build/libs/myApp.war I tried to extract

---

the required classes from this.war and named it myApp-extracted.war: war -d classes/webapp-common/WEB-INF/lib myApp.war But if I try to run this.war on a container as: java -jar myApp-extracted.war I am getting this error: Exception in thread "main"

java.lang.NoClassDefFoundError: myApp/Util\$

This is because the war file doesn't include some classes from the sub-directories inside the webapp-common/WEB-INF/lib. How can I solve this problem? How can I get a correct.war file where all the required classes and dependencies are present? A: The approach you are following is using the build path, and that is very dangerous, because WAR is not package/folder based and so it cannot be easily and easily extracted and deployed. War is a zip file, hence you should manage by yourself its

---

extraction and installation. The resulting WAR is just an artifact of the maven-war plugin. If you want to package your code (or more precisely your entire application/library), you should use a war plugin. This is a quote from the war plugin documentation: WAR is a ZIP file and therefore does not contain a manifest, or other external dependencies. This makes it relatively easy to use Maven's built in tools to do package conversions, including to create a JAR file. The WAR plugin has a War Mojo which is just a Maven project. In order to create a WAR file, you just have to run Maven. The maven

I saw this error and tried to install, but not success, now I tried the following: Uninstall office. Download MS Office 2016 Toolkit (in.msi format) Open msiexec.exe (In Windows 7 or above) In arguments type: msiexec.exe /x64 /e:MSI. Install Office 2016 Toolkit. Also I changed a registry keys to locate the folder where installed the MS Office 2016 Toolkit at C:\Program Files (x86)\Common Files\Microsoft Shared\OFFICE15\OLAX. This didn't solve my problem. A: The problem was the presence of

---

the configuration.json file in the folder:  
C:\Program Files\Common Files\Microsoft Shared\OFFICE15\OLAX I deleted this file, and it is working now.

Role of the L-arginine/nitric oxide pathway in the antigen presentation process of dendritic cells. Dendritic cells (DCs) are essential antigen-presenting cells (APCs) in the immune system. The endotoxin-induced natural killer (NK) activity of monocyte-derived DCs (MDDCs) was investigated in vitro using a standard chromium release assay. MDDCs strongly induced natural killer (NK) cell-mediated cytotoxicity at both effector to target (E/T) ratios of 1:1 and 2:1 and also at the E/T ratio of 4:1. The NK cytotoxic activity of MDDCs was completely inhibited by 100 microM NG-nitro-L-arginine methyl ester (L-NAME) but did not change when K562 cells were cultured in

---

the presence of 100 microM L-NAME. This suggests that the cytotoxic activity of NK cells is mediated by the induction of nitric oxide (NO). The NO synthase activity of NK cells was also inhibited by L-NAME, but that of monocytes or MDDCs was not. This suggests that monocytes and MDDCs produce NO by a factor different from that produced by NK cells. The effector cell (CD16-CD56+) of NK cells was strongly inhibited by L-NAME. This indicates that NK cells may produce NO through a mechanism that differs from that for other effector cells. In addition, 100 microM L-NAME strongly suppressed the differentiation and maturation of both monocytes
