New Updated PC Game Files in 40 Mb:.In a previous post we talked about the subject of CMake 3.11 and some of its new features and fixes. If you read that post you will remember that one of the highlighted features was CMake's support for use of Windows toolchains. Since that time, version 3.11 of CMake has been released and this post is a brief summary of some of the features and fixes that it has brought to Windows users. Toolchain Support There are three different toolchain types now supported by CMake, Standard, MinGW and Visual Studio, as well as the Generic toolchain. While these toolchain types have existed in CMake since it was first released, 3.11 has made many important changes: Visual Studio makes use of the new Visual Studio toolsets The values that get passed to the compiler in the OPTIONS argument of the add\_custom\_command command are now displayed in a very user friendly way The vcpkg packages are now enabled by default All CMake installations will now have a CMakeTutorial. The use of vcpkg has been extended to make the use of.cmake files in Windows, and the use of vcpkg packages. All
